### Investment Philosophy

The Fund invests primarily in U.S. dollar-denominated fixed income securities. Under normal market conditions, the Fund invests at least 80% of its net assets, plus borrowings for investment purposes, in a diversified portfolio of fixed income instruments. Fixed income instruments include but are not limited to: obligations issued or guaranteed by the U.S. Government, its agencies, or instrumentalities; corporate debt securities; municipal debt securities; U.S. dollar-denominated debt of foreign issuers; and securitized securities including mortgage-backed and asset-backed securities, which may also include non-agency mortgage-backed securities. These securities may have different types of interest rate payment and reset terms. The Subadvisor's approach is grounded in detailed bottom-up research and emphasizes careful security selection.

Retirement Class shares commenced operations on June 1, 2018. The performance attributed to the Retirement Class shares prior to that date is that of the Institutional Class shares. Performance prior to June 1, 2018 has not been adjusted to reflect the lower expenses of Retirement Class shares. During this period, Retirement Class shares would have had returns similar to, but somewhat higher than, Institutional Class shares due to the fact that Retirement Class shares represent interests in the same portfolio as Institutional Class shares but are subject to lower expenses.

Expense ratio information is as of the Fund's current prospectus, as supplemented. Gross expenses are the Fund's total annual operating expenses. The net expense ratios for this fund are subject to a contractual management fee waiver and/or expense limitation agreement, excluding interest expense and acquired fund fees and expenses (if any), through 02/28/2025.

**Performance data shown represents past performance and is no guarantee of future results. Past performance is net of management fees and expenses and reflects reinvested dividends and distributions. Past performance reflects the beneficial effect of any expense waivers or reimbursements, without which returns would have been lower. Investment returns and principal value will fluctuate and when redeemed may be worth more or less than their original cost. Returns for periods less than one year are not annualized. Current performance may be higher or lower and is available through the most recent month end at harborcapital.com or by calling 800-422-1050.**

## MANAGER COMMENTARY

As of 12/31/2024

**“In 2025, market participants are generally forecasting spreads to widen from their current, historically tight levels.”**

Income Research + Management

### Market in Review

Risk assets continued to rally for much of the fourth quarter of 2024, continuing the trend from the first nine months of the year. Buoyed by positive macroeconomic data and a decisive presidential election outcome, credit spreads reached their narrowest level in over two decades, and the S&P 500 Index climbed above 6,000. Consumer Price Index (“CPI”) growth picked up slightly in October and November with year-over-year increases of 2.6% and 2.7%, respectively, while the most recent estimate of annualized Gross Domestic Product (“GDP”) came in above expectations at 3.1%. The positive market sentiment cooled after the Federal Open Market Committee meeting in December, when the U.S. Federal Reserve (“Fed”) cut rates by 0.25% to bring the fed funds target rate range to 4.25%–4.50%. Although the rate move was expected, Chair Powell’s subsequent comments indicated a likely slowdown in the pace of future rate cuts. The updated Fed dot plot showed a median estimate of two rate cuts in 2025, down from September’s estimate of four, as Fed officials grew wary of the impact President-elect Trump’s tariff and immigration policies could have on the U.S. economy. The Treasury curve steepened considerably during the quarter, with the front-end inversion almost disappearing entirely. Treasury bill rates fell while bond yields rose, led by the 7-year tenor’s 0.83% increase to 4.48%. The 3-month/30-year yield inversion, typically seen as a leading indicator for economic recessions, reversed after 25 months in negative territory.

### Portfolio Performance

During the fourth quarter, the Harbor Core Plus Bond Fund (Institutional Class, “Fund”) returned –2.81%, outperforming its benchmark, the Bloomberg US Aggregate Bond Index, which returned –3.06%.

The Fund's outperformance was mostly driven by an overweight to corporates, particularly finance and industrial bonds, as well as to commercial mortgage-backed securities (“CMBS”) and asset-backed securities (“ABS”). Our underweight to Treasuries also contributed to relative performance as spread product continued to outperform Treasuries. This was slightly offset by security selection within agency residential mortgage-backed securities (“RMBS”) and an out-of-benchmark allocation to SBAs, which underperformed Treasuries and other securitized sectors and hurt relative performance.

### Contributors and Detractors

The largest contributors to Fund performance included Charter Communications Operating, Synnex, Occidental Petroleum, and Global Atlantic Financial.

The largest detractors from Fund performance included agency RMBS and Allwyn Entertainment Financing. Agency RMBS underperformed Treasuries and other securitized sectors following heightened Treasury-rate volatility around the 2024 presidential election and hawkish Fed commentary in December. Allwyn Entertainment underperformed amid lower post-COVID general consumer sentiment and increased capital expenditure and leverage in the third quarter of 2024, following a dividend payment to its parent. Allwyn reported that the dividend was out of the ordinary – outside its stated dividend policy – and that it is on track for strong fourth quarter results. Despite the underperformance, we continue to be constructive about these holdings and will continue to hold them.

# Harbor Core Plus Fund

## MANAGER COMMENTARY

As of 12/31/2024

### Positioning

We strive to remain duration neutral and curve neutral to the benchmark.

Positive contributors to relative performance included our security selection within the Financials, Industrials, Utilities, and RMBS sectors. Relative performance was also helped by our overweight to Financials, CMBS, and ABS, and our underweight to Treasuries.

Detractors from relative performance included security selection within the agency RMBS sector and an out-of-index allocation to SBAs.

The Fund's security selection within the AAA and BAA credit buckets, as well as our underweight to AAs and overweight to BAAs, aided relative performance. On the other hand, security selection within the AA credit bucket and an underweight to A-rated securities detracted from relative performance.

The Fund's out-of-benchmark allocation to RMBS aided relative returns, while the allocation to SBAs detracted from relative performance.

We invest exclusively in U.S. dollar-denominated, fixed-income securities.

### Buys & Sells

We purchased Atlas Warehouse Lending Co. 6.05% 2028 in the new issue market at 1.95% of spread over the 3-year Treasury. We purchased the security as a tactical trade to capitalize on the inaugural bond issuance from Atlas, based on the success of various other bond issuance from other business development company ("BDC") funding vehicles that are perceived to be supported by a strong parent. We believe this can also hold true for Atlas Warehouse Lending.

We sold Warner Bros Discovery 5.141% 2052. This was an opportunistic sale due to relative value and spread widening amid merger and acquisition ("M&A") discussions.

### Sector Overweights and Underweights

Entering 2024, the Fund was overweight securitized products and underweight Treasuries, and that theme has remained largely the same throughout the year, as we increased our securitized overweight to 18.6% and the Treasury underweight to 22.3%, as of year-end. During the quarter, we increased the Treasury underweight by 2.2%, our overweight to credit by 0.9%, and our overweight to securitized by 1.7%. Within credit, we increased our allocation to finance and industrials. On the securitized side, we increased exposure to ABS, CMBS, and RMBS. The Fund's yield increased by 0.5% during the quarter, as an increase in Treasury rates pushed corporate yields higher despite the Fed's December cut.

### Country Allocations

The Fund's country allocation relative to the benchmark did not change during the quarter. IR+M invests exclusively in U.S. dollar-denominated, fixed-income securities. With that said, consistent with our bottom-up approach, we will opportunistically purchase Yankee issues when we believe they are attractive on a relative value basis. During the quarter, the Fund's allocation to Yankees increased moderately to 10.31%.

**Performance data shown represents past performance and is no guarantee of future results. Past performance is net of management fees and expenses and reflects reinvested dividends and distributions. Past performance reflects the beneficial effect of any expense waivers or reimbursements, without which returns would have been lower. Investment returns and principal value will fluctuate and when redeemed may be worth more or less than their original cost. Returns for periods less than one year are not annualized. ## MANAGER COMMENTARY

As of 12/31/2024

### Outlook

In 2025, market participants are generally forecasting spreads to widen from their current, historically tight levels. Dealers project an increase in supply driven by an uptick in M&A activity and increased capital expenditure stemming from strong economic growth. The impact of President-elect Trump's policies, particularly tariffs, poses uncertainty for credit markets, as do continued geopolitical conflicts and intentional releveraging through M&A and higher capital expenditure. These risks are likely to have an uneven impact on different sectors and different issuers. We believe our bottom-up approach will allow us to identify and capitalize on any resulting dislocations and attractive market opportunities.

Performance data shown represents past performance and is no guarantee of future results. Past performance is net of management fees and expenses and reflects reinvested dividends and distributions. Past performance reflects the beneficial effect of any expense waivers or reimbursements, without which returns would have been lower. Investment returns and principal value will fluctuate and when redeemed may be worth more or less than their original cost. Returns for periods less than one year are not annualized. ### What Worked

- The Harbor Core Plus Bond Fund portfolio outperformed the Bloomberg Aggregate Index in the 4th quarter.
- Security selection and asset allocation within the portfolio equally drove outperformance.
- The portfolio's overweight exposure to CMBS and ABS and underweight to Treasuries also contributed to relative returns.
- Security selection within Financials and Industrials also contributed.
- Top performers: CHARTER COMM OP, TD SYNEX CORP, and OCCIDENTAL PETROL.

### What Didn't Work

- Security selection within Agency RMBS detracted from relative returns.
- The portfolio's out of benchmark exposure to RMBS and SBAs detracted from relative returns.
- Bottom performers: Three Agency RMBS securities.

### What Worked

- The Harbor Core Plus Bond Fund portfolio outperformed the Bloomberg Aggregate Index over the past 12 months.
- Security selection within the portfolio was the primary driver for outperformance.
- Selection within Financials, Industrials, RMBS, and ABS were additive.
- The portfolio's underweight to Treasuries, overweight to Financials, and CMBS sectors contributed to relative returns.
- Top performers: a RMBS security, ENERGY TRANSFER, and CMS ENERGY CORP.

### What Didn't Work

- The portfolio's out-of-benchmark exposure to RMBS and underweight to Industrials detracted from relative returns.
- Security Selection within CMBS detracted from returns.
- Bottom performers: An Agency RMBS security, and two CMBS securities.

## IMPORTANT INFORMATION

### Risks

There is no guarantee that the investment objective of the Fund will be achieved. Fixed income investments are affected by interest rate changes and the creditworthiness of the issues held by the Fund. As interest rates rise, the values of fixed income securities held by the Fund are likely to decrease and reduce the value of the Fund's portfolio. There may be a greater risk that the Fund could lose money due to prepayment and extension risks because the Fund invests, at times, in mortgage-related and/or asset backed securities.

### Benchmarks

The Bloomberg US Aggregate Bond Index is an unmanaged index of investment-grade fixed-rate debt issues with maturities of at least one year. This unmanaged index does not reflect fees and expenses and is not available for direct investment.

### Disclosures

All data except for top holdings, performance, and yields is provided by the subadvisor.

Credit quality breakdown is based on ratings from Moody's, Standard and Poor's and Fitch. In cases where all three credit rating agencies have assigned different credit ratings to the same security, the middle rating is used. In cases where the security is rated by two rating agencies, the lower rating is used and, in cases where only one rating agency has assigned a credit rating to a security, that rating is used. Ratings are measured on a scale that generally ranges from AAA (highest) to D (lowest). Securities that receive no rating from an independent agency have been categorized as 'not rated.' Certain unrated securities (such as derivatives) are not reflected in the data shown. U.S. Treasury and U.S. Agency securities appear under the category U.S. Government/Agency. The credit quality of securities in the Fund's portfolio does not apply to the stability or safety of the Fund. The Fund itself has not been rated by an independent rating agency.

Current 30-Day Yields are for the Institutional Class and represent the average annualized income dividend over the last 30 days excluding gains and losses as defined by the SEC. Current 30-Day Yield is the Current 30-Day Subsidized SEC Yield and reflects reimbursements or waivers of fees currently in effect. Current 30-Day Yield-Unsub is the Current 30-Day Unsubsidized SEC Yield and does not reflect reimbursements or waivers of fees currently in effect.

Due to rounding, percentages may not sum to 100.

Views expressed herein are drawn from commentary provided to Harbor by the subadvisor and may not be reflective of their current opinions or future actions, are subject to change without prior notice, and should not be considered investment advice.

This information should not be considered as a recommendation to purchase or sell a particular security. The weightings, holdings, industries, sectors, countries, and returns mentioned may change at any time and may not represent current or future investments.

As a result of changing market conditions, total net asset levels, expenses and other statistics may change at any time and may differ from those shown.

The total amount shown for sector, industries, or country holdings may be greater than 100% because of the inclusion of derivatives and the collateral securities supporting those instruments.

Sector allocations are determined using the Global Industry Classification Standard (GICS), which is a service of Morgan Stanley Capital International (MSCI) and Standard & Poor's (S&P).

## IMPORTANT INFORMATION

### Attribution Disclosures

All data for this attribution analysis is provided by Income Research + Management.

Linked Performance by Sectors data is produced from FactSet using data supplied by State Street Bank and Trust Company.

Other is the contribution to relative return due to the cumulative differences in carry, rolldown, and convexity.

Shape is the contribution to relative return due to the difference between the portfolio's and the index's duration profiles. The basic formula is the [(difference of each key rate duration between the portfolio and the index) multiplied by the total return of the respective key rate Treasury] minus the Duration and Other effects.

### Definitions

Beta is a measure of systematic risk, or the sensitivity of a fund to movements in the benchmark. A beta of 1 implies that the expected movement of a fund's return would match that of the benchmark used to measure beta.

Duration is a commonly used measure of the sensitivity of the price of a debt security, or the aggregate market value of a portfolio of debt securities, to change in interest rates. Securities with a longer duration are more sensitive to changes in interest rates and generally have more volatile prices than securities of comparable quality with a shorter duration.
